

# KF Summer Pro

## Summer Annual Mix

KingFisher Summer Pro is a mix of 60% BMR Sugar Pro 55 sorghum-sudan and 40% BMR Pearl millet. This mix features the following benefits:

1. When sorghum-sudan is at its cutting height of 35 – 40 inches, the bottom 24 inches of the plant is stalk – somewhat wasted space. By adding millet with the sorghum-sudan, that wasted space becomes filled with millet, increasing the entire density of the forage crop.
2. Millet and sorghum-sudan bring two different rooting actions to the soil. The mix of the two creates a stronger sward than just one alone.
3. Regrowth is faster with millet. So with millet in the mix, the forage will come back more quickly after a cutting.
4. As always, two species are better than one when it comes to reducing risk. With millet and sorghum-sudan, we can be successful in a wider range of soils and growing conditions, which can vary even in the same field.

## Agronomic Traits

Seedling Vigor	Excellent
Maturity	Medium
Yield	Excellent
Standability	Excellent
Disease Resistance	Excellent
Drought Tolerance	Excellent

## Planting Recommendations

- Plant @ soil temperature of 60-65 F
- Planting depth: 1"

## Planting Rates

- 25-35 lbs per acre
