

# ZORRO

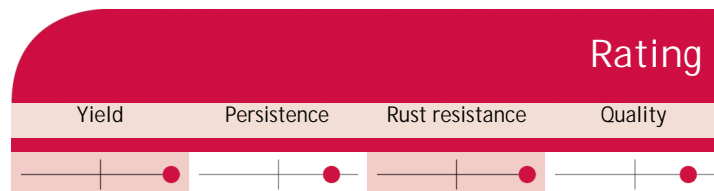

## Lolium multiflorum

## Italian ryegrass

Are you looking for high performance?

- Even yield over the year
- Out yielding standard varieties by far
- Top crude protein yield
- Remarkable rust resistance

### Great characteristics

ZORRO is a tetraploid Italian Ryegrass with excellent qualities like: high resistance to Rust, very productive, resistance to dry periods, erect growth even in times of rainy weather. At the same time, great results achieved under warm climatic conditions prove ZORRO has a high drought tolerance as well. Furthermore, the high production is easy to harvest, as ZORRO is very resistant to lodging.

### High quality yield

At eleven trail stations in north Germany, ZORRO showed the highest DM Yield.

In the regrowth the appearance of stems is fewer compared to other varieties, indicating ZORRO has a higher leaf mass. This secures a high production of very high quality forage because more leaf than stems means more digestible forage.
